DETAILED ACTION

Drawings

1. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 U.S.C. § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-56 are rejected under 35 U.S.C. 102 (b) as being unpatentable over the publication of Jun Rekimoto.

As for claims 1, 8, 17, 27, 32, 36, 43, and 52, Jun Rekimoto teaches a display (Fig. 3) and a hand-held electric device, including pagers, and cell phones. Instead of using a pen or a touch sensitive display, there are other possibilities to operate hand-held devices. They are using a tilt as the input method corresponding to a navigation sensor.

As for claims 2-5, Jun Rekimoto teaches that it is possible to control a cursor by tilting while menu items are fixed on the screen. The equation on (column 4, lines 12-26) simultaneously teaches how to control the three effects of viewing transformation like panning,

zooming and rotating corresponding to at least moving a cursor, panning, scrolling and navigating part of said image.

As for claims 6-7, 9-16, 18-26, 28-31, 33-35, 37-42, 44-51, and 53-56, Jun Rekimoto teaches the user controls the location of the cursor and looks around the map by keeping the button depressed and rotating the display left and right, or up and down (Fig. 3).

Response to Amendment

Applicant's arguments filed on 3-29-2002 have been fully considered but they are not persuasive. The applicant argued that the prior art used, Rekimoto, does not movement of said electronic device relative to the surface. Examiner disagrees because the user hold the device it is considered relative to the surface. The applicant has to be more specific because relative to the surface is too broad. Furthermore the applicant argued that the prior art does not teach as claimed in independent claims 36 and 43 "for movement does not include movement of said device. Again examiner disagrees because the prior art teaches the movement of the user's hand to operate the device and not the device by itself. The applicant argued again the prior art does not teach as claimed in independent claim 52 " moving a part of a user in front of a navigation sensor". Examiner disagrees because the prior art teaches that the user hold the device with one hand and he or she can observe the display which can be translated as being in front of the navigation sensor. Therefore the rejection stands as was rejected in the previous office action.

Conclusion

Art Unit: au 2674

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
